

Integrate Your WordPress Site with the CreatePay WooCommerce Plugin

Below is a step-by-step guide to integrate your existing WordPress + WooCommerce site with the Open Payment Network WooCommerce plugin.

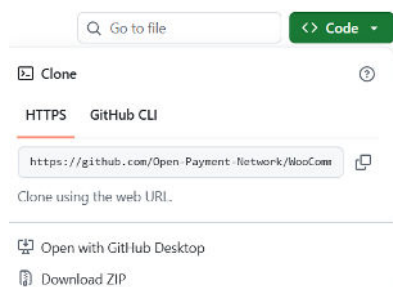

1) Check Prerequisites (2 minutes)

- WordPress / WooCommerce versions: Ensure compatibility with WordPress up to 6.x and WooCommerce 6.x.
- PHP extension: Ensure BCMath is enabled on your hosting server.

Tip: In WordPress, go to WooCommerce → Status to see your system report.

2) Download the Plugin ZIP (1 minute)

Visit the repository at <https://github.com/Open-Payment-Network/WooCommerce> → Code → Download ZIP.

3) Install the Plugin

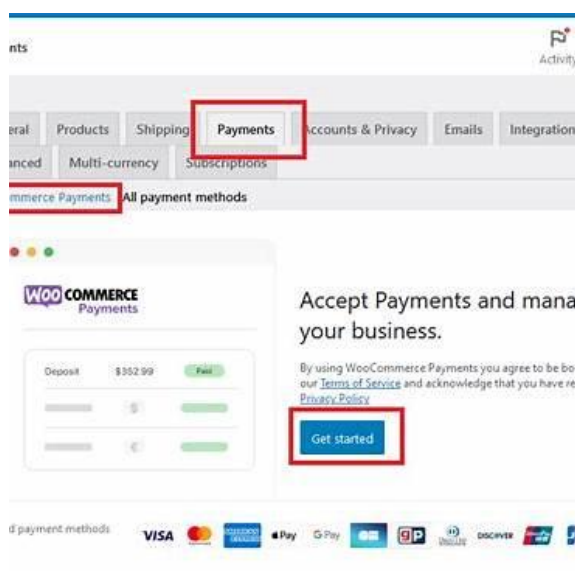

via WordPress admin:

1. In WP admin, go to Plugins → Add New → Upload Plugin.
2. Choose File (select the ZIP you downloaded) → Install Now → Activate.

4) Enable the Gateway in WooCommerce (2 minutes)

1. Go to WooCommerce → Settings → Payments (or Checkout).
2. Find Cardstream in the list of methods, click Manage/Set up, toggle Enable, then Save changes.

5) Configure Credentials (5–10 minutes)

In the gateway settings screen, fill in the following:

- Title - Cardstream
- Type of Integration – Direct or Hosted as per your requirements
- Description – Pay Securely via Credit/Debit Card CreatePay
- Merchant ID – as per your welcome email
- Merchant country code – 826
- Signature Key– as per your welcome email.
- Gateway URL (Hosted) - <https://payments.createpay.com/paymentform/>
- Gateway URL (Direct) - <https://payments.createpay.com/direct>
- Responsive Form – Yes
- Customer Wallets - Yes

6) (Optional) Pre-set Defaults via config.php

You can pre-fill defaults in the config.php file inside the plugin directory. This is optional — UI configuration is sufficient.

7) Test the Checkout (5 minutes)

1. Add a low-priced test product to your cart.
2. Proceed to Checkout and select your named payment option.
3. Complete a test transaction using your credentials.
4. Confirm the WooCommerce order status updates to Processing/Completed.
5. Confirm the payment has been completed in your CreatePay Dashboard - <https://dashboard.createpay.com/> using your login credentials supplied in your welcome email.

*If using a test site, test cards can be used, located <https://guides.gitbook.io/integrationguide/references/feature-references/integration-testing>, if using a live site you must use live card details for any test.

8) Go Live

Perform a small real transaction to confirm settlement.

9) Quick Troubleshooting Checklist

- Plugin active? Check Plugins → Installed.
- WooCommerce enabled and updated? Check WooCommerce → Status.
- PHP-BCMath installed? Confirm with your host.
- Order status not updating? Check firewalls, security plugins, and gateway callbacks.
- Payment method not showing? Ensure it's enabled under WooCommerce → Settings → Payments.
